Cobham Aerospace Communications selected by Dassault Aviation for the AVSIMAR programme

Cobham Aerospace Communications has been selected by Dassault Aviation for the audio/radio communication system of French Navy's next generation Surveillance and Maritime Intervention (the acronym of which is AVSIMAR in French language) aircraft. This aircraft is based on a Dassault Aviation Falcon 2000 business jet plate-form, that is missionized with specific sensors and systems. One of the most relevant of these specific mission systems is the audio/radio management system combined with radio control.

Cobham Aerospace Communications will supply this audio/radio management system, that manages the crew communications, both internal and external to the aircraft.

This system features full compliance with French military requirements, together with significant weight savings and enhanced reliability compared with traditional technologies.

Rabah Bouda, Cobham Aerospace Communications' SVP Engineering, said "We are proud of our very close relationship with Dassault Aviation's engineering teams. Together we have come up with a highly efficient system that enable the aircraft to fulfill very demanding missions."

Yves Ambiehl, Cobham Aerospace Communications' VP Sales & Marketing, commented "this new contract comes as one additional element to the large quantity of products that we supply to Dassault Aviation's programs, both civil and military. We are convinced that our technology will contribute to the success of Dassault Aviation's products on the market".

About Cobham Aerospace Communications

Cobham Aerospace Communications is a leading supplier of airborne avionics systems in the fields of satellite communications, audio/radio management, antennas, lights, clocks, and man-machine interfaces. We are an international company with headquarters in Rungis (Paris), France, and operate multiple sites in France, the United States, Canada, South Africa, and Denmark, with sales offices in Singapore, China and India. Through its unique technologies, Cobham Aerospace Communications has established strong and enduring partnerships with many of the world's leading manufacturers of commercial and regional aircraft; business jets; general aviation aircraft; military trainer, transport, and fighter aircraft; helicopters; and UAVs.
